It is recommended that if you are unfamiliar with this type of work that you refer to a qualified service center specializing in this type of work. It is also recommended that if you choose to do this work yourself that a factory service manual be obtained for the proper procedures pertaining to removal, replacement and proper torque specifications for your vehicle. This instruction set is intended as a guideline for the safe installation of Energy Suspension's polyurethane bushings, once you have removed the factory components from your vehicle. Wheel alignment is almost always disturbed when suspension components are removed or replaced. It is recommended that you have the alignment checked on your vehicle at a qualified alignment shop. Energy Suspension recommends that you read over all the installation instructions and check all P/N's and quantities in the parts list before you start. Call customer service at 949-361-3935 if the parts in your kit do not match this parts list. Prior to installation, make sure that your car is in excellent mechanical condition and that there are no suspension or steering related problems. This part has been designed to work only with a car that is in good state of repair. No matter how carefully we design our parts, this is one area we have no control over and cannot be held responsible.

## Parts List: 8.1105

- 1 - 1291 Rear Shifter Mount Bushing
- 2 - 15.10.92.39 Rear Mount Sleeves
- 2 - 15.03.140.38 Rear Mount Washers
- 2 - 15.05.97.42 Rear Mount Bolts
- 1 - 17P17675 Instructions Sheet

**Rear Shifter Mount:** Transmission tunnel heat shield must be removed to gain access to mount location. Rear drive shaft center support may also need to be loosened for ease of removal and installation of new bushing. See picture for correct orientation of new bushing when installing. A small dab of grease on the end of the shifter will also help in installation.
