Heat Screen Installation Instructions

STEP 1: Clean area thoroughly by removing dirt and debris. Use a degreaser to make sure surface is clean and free of oils, grease and grime.

STEP 2: It helps to make a template out of paper or cardboard of the area you would like to protect.

STEP 3: Transfer the template to the Heat Screen and cut out shape with scissors.

STEP 4: Apply Heat Screen by pulling back a small portion of the release liner and press material into place.

STEP 5: Once Heat Screen is in the proper place, slowly pull back the release liner and press material firmly onto the surface.

TIP: Use an installation roller where possible to roll the material and to ensure a good bond.
